

Compact Kit

- Longevity of LED's
- Adaptable to various dental mirrors
- Very economic since LED's consume very little energy
- Evaluation of the picture while composing
- Reflections can be seen in advance, avoided and even deliberately defined
- Colour temperature in approximately daylight quality
- Defined light environment result in constant results
- Fits all digital cameras, video cameras and microscopes
- Chin support for defined distance and steady pictures
- Shadow-free illumination during intra-oral and macro photography
- Adapts to most camera's

Elements of the doctorseyes Compact System

The doctorseyes contrastors for occlusal and front teeth photos help you to point out details more easily by blinding out unnecessary background. The contrast will give your photos a professional appearance.

doctorseyes cheek retractors enable the panoramic and lateral view to be shot easily. They are made of transparent plastic and are autoclavable.

A diffuser helps to illuminate areas evenly and to reduce unwanted reflections.

The ultrabright mirrors come with a removable silicon handle for comfortable handling, can be autoclaved with the mirror.

Special doctorseyes ultrabright mirrors are easily mounted on the doctorseyes system to take mandibular and maxillary images.
